Author	Byron Douglas Butt
Title	Remembering Our Veterans – Data Management Project
Grade Level	Junior High – grade 7
Subject Area	Mathematics
Overview of unit/lessons/activities (assumptions of prior knowledge/learning)	**Overview:** This particular project utilizes data collected from various sources (Veterans Affairs, Royal Canadian Legion, Department of National Defence) based on Canadian military statistics. It allows students to consolidate some of their understanding of data management, while using the theme of Remembering Our Veterans. This could be done at any time of the year but would be especially appropriate if the unit on data management (**GCO F**) is covered during October or November. Some data files are provided, including some extensive data from World War I and other general information about conflicts of the past century. Students will plan and create a **PowerPoint** presentation using some of this information, as well as incorporating other data they have found on their own, to show their knowledge of different types of data displays (especially bar graphs and histograms) and to show their analysis of the data they have used. They will use **Inspiration** to prepare their plan, giving an overview of the information and displays they will include in their presentation. If data displays are done by hand, students will need to scan their work or take a digital photograph of it in order to include this work in the presentation. **Background:** Students in grade 7 and 8 work on outcomes related to **data management**. They learn the development of surveys, collection of data, display of data using circle graphs, histograms, box-and-whisker plots, and scatter plots, as well as the analysis of such data that is collected. Although in grade 7 it is a good idea to begin with hand drawn data displays, using a spreadsheet application such as **Microsoft Excel** or **AppleWorks** would produce more polished data displays. These programs are useful as enrichment in grade 7 and as a core component of the grade 8 curriculum in data management. There are also specialized software applications, which may be available in some schools (**Fathom** and **TinkerPlots**) which allow data to be displayed in a variety of ways. There are many opportunities for incorporating ICT (Information and Communication Technology) into mathematics activities. Some suggestions are given here. Not all of these activities would be used in this project. Students might use such programs as **Inspiration** or **Writer's Companion** to plan their work and may also use a word processor such as **Microsoft Word**, **AppleWorks** or **Star Office** to design the final product. Students may use the Internet to do webquests, search for survey project ideas, access Statistics Canada (**E-STAT**) or other websites of statistics for meaningful data information, etc. Students may use **PowerPoint** to develop class presentations on how to design a proper data display. **Digital Video** (**IMovie / Pinnacle Studio**) may be used to design "math movies" to demonstrate an understanding of particular concepts such as "range" or "median".

Correlations to ICT and curriculum outcomes	Gr. 7 Mathematics Outcomes	**F3**:	select, defend, and use appropriate data collection methods and evaluate issues to be considered when collecting data.
		F4:	construct a histogram
		F7:	formulate statistics projects to explore current issues from within mathematics, other subject areas, or the world of students.
	ICT Outcomes:	**SEHI 9.3**	understand, model, and assume personal responsibility for the acceptable use of copyrighted and other information resources
		PTS 9.5	develop multimedia presentations, based on sound principles of design, with increasing confidence, efficiency and independence
		RPSD 9.1	select appropriate measuring and recording devices and/or software to collect data, discover patterns of change over time, solve problems and make logical decisions based on their investigations; with teacher assistance
		RPSD 9.2	create and use electronic charts, maps, tables, graphs, spreadsheets, and databases to collect, analyse and display data independently
		RPSD 9.9	accurately and independently cite information sources
Projected timeline for preparation and for carrying out activities	Four to six class periods: (estimated based upon periods of approximately 50 minutes each)		
	Period 1:	Have students work in groups to develop their presentations. (2 to 4 students, depending upon the availability of computers). With the whole class, review the software titles the students will be using - Inspiration and PowerPoint. "QuickStart" tutorials for these titles are available at http://lrt.ednet.ns.ca. See the list of resources for the exact links. You should also review of bibliographic formats, copyright requirements and methods of citing work.	
	Period 2:	Continue the work of designing the layout of the presentation, using Inspiration software.	
	Periods 3-5: (if all needed)	The groups continue to work with the technology and their data, producing their PowerPoint presentations, using the secondary data provided. Graphical displays of data should be produced for the presentation. These can be made using spreadsheet software (e.g., Microsoft Excel, AppleWorks)	
	Final period: (if needed)	Groups present their work to the class.	

Equipment Requirements: (computers, software, etc)	Computers with internet access and use of brainstorming/planning software, as well as word processing, presentation, and spreadsheet software, e.g., **Inspiration,** Microsoft **Word**, Microsoft **Excel**, and Microsoft **PowerPoint**. Since students will be working in groups, the number of accessible computers required is variable. Several computers in one or two classroom "pods" would work effectively with some pre-planning or if teachers carry the project over a longer period of time to allow some groups access to the computers while others are working on other aspects of the curriculum. Access to a computer lab may be useful, but is not a necessity. Depending on the school, a mobile lab of laptops may be available for use during this project.

Teaching materials provided (Blacklines, worksheets, templates, teacher materials)	**Student assignment handout:**
	     gr_7_data_student_handout.doc
	Data samples:
	     canada_at_war_data.doc WWI_data.doc WWI.xls (Excel)
	     WWI.ftm (Fathom) WWI.tp (TinkerPlots)

Resources available for teacher/student use (websites, references, etc)	For information about using technology:
	     http://lrt.ednet.ns.ca/PD/pdf/powerpt_qs.pdf – PowerPoint "QuickStart"
	     http://lrt.ednet.ns.ca/PD/pdf/insp_v6.pdf – Inspiration 6 "QuickStart"
	     http://lrt.ednet.ns.ca/PD/pdf/insp_v7.pdf – Inspiration 7 "QuickStart"
	     www.atomiclearning.com – learn how to use a variety of software programs (full service with paid subscription)
	     www.office.microsoft.com – learn how to use a variety of software programs by Microsoft
	     http://en.wikipedia.org/wiki/Main_Page – for research purposes
	     http://teach-nology.com/web_tools/rubrics or http://rubistar.4teachers.org/index.php – to design a rubric
	
	For sources of data about Canadian military history:
	     Royal Canadian Legion: http://www.legion.ca/asp/docs/about/MilHeritage_e.asp
	     Department of National Defence: http://www.forces.ca/
	     Directorate of History and Heritage (Dept. of National Defence): http://www.forces.ca/hr/dhh/
	     Veterans Affairs Canada: http://www.vac-acc.gc.ca/
	     Veterans Affairs Canada Youth site (choose "Canadian Military History") http://www.vac-acc.gc.ca/youth/
	     EBSCO: http://search.epnet.com
	
	For a wealth of Canadian statistical information:
	     Statistics Canada, E-STAT: http://estat.statcan.ca/
	     Statistics Canada Online Publication:
	               Statistics: Power From Data! http://www.statcan.ca/english/edu/power/about/about2.htm

Detailed instructions for each activity or lesson (teacher notes, activity information, learning strategies, teacher role, student roles)	**Period 1:** Review **Inspiration** and **PowerPoint**. Discuss design options and principles. Review the use of bibliographic formats and methods of citing sources. Have students work in groups to develop their presentations. (2 to 4 students, depending upon the availability of computers). This could be done in class, using a computer and LCD projector for the review and samples, and then have students work on their plans in groups. **Period 2:** Groups continue developing their presentation, using **Inspiration** to produce their final plan. This could be done in class, with computers available for groups as they complete their ideas and discussions. If there is a computer lab available, this could also be carried out in that situation. Students may be told to use only the secondary data provided to them, or they could be asked to locate other relevant information for inclusion in their presentations. This would require the use of computers for searching the Internet to find useful information. The analysis of the data used is an important component of the activity. **Periods 3, 4** (and 5 if needed) The groups continue to work with the secondary data, and develop their statistical displays and their presentations. They may require other software applications, such as **MS Excel** or the **AppleWorks** spreadsheet module in order to produce the charts they wish to display. These can be included in the presentations. If their displays are created by hand, students will need to digitize them for the presentation. They can be scanned, or a digital camera can be used to photograph the sheets, and the graphics inserted into the presentation. **Final Period:** Groups present their work to the class. Detailed student instructions can be found in the file: gr_7_data_student_handout.doc
Student products expected	An **Inspiration** web, created to help in the development of ideas for the plan of the presentation. A **Powerpoint** presentation containing tables, charts, and text, with options for the inclusion of graphics and sounds. **NOTE:** Any materials included in the presentation must comply with Canadian copyright laws. See comments below.

Samples (include teacher notes, assessment information, student work if available)	**Data files:**
	    Excel - WWI.xls
	    Fathom - WWI.ftm
	    TinkerPlots - WWI.tp

	    data_plan_group_rubric.doc
	    data_presentation_rubric.doc
	    data_scoring_rubric.doc
	Sample products:
	    Inspiration 6 - gr_7_sample_plan_insp6.ins
	    Inspiration 7 - gr_7_sample_plan_insp7.isf
	    PowerPoint - gr_7_data_project_sample.ppt

Logistics (organization, grouping, management issues, access to technology)	This type of assignment works well as a collaborative project. Groups could have 2, 3, or 4 students, depending on the classroom situation and the availability of technology. Groups should have clear instructions on their tasks and the role each member is expected to carry out. In selecting members of groups, teachers should try to combine students so that groups include various members with a variety of skills and knowledge. Ideally, each group should include at least one member with a good grasp of the mathematical concepts; a member with technological skills; a member with creative ideas; and someone with organizational ability. Managing classroom activities where students are working on their own products, and combining work on the computer with tasks done away from the machines can be challenging. In a classroom, with three or four computers, these tasks require careful scheduling; each machine might be turned into a centre for use for a specific purpose. For example, one computer may be designated the "Research computer" and students go to that machine to look up information or collect data. A computer lab is not always appropriate or accessible, and various strategies, such as creating activity centres or scheduling of computer time for each group, should be considered in planning this project. Much of the work – planning the presentation, organizing the data, any hand-done data displays – can be done "off-line" and students can work on these tasks without access to a computer. Students need to be aware of Canadian copyright laws. Here are some suggestions for ensuring that materials used in the presentations comply with copyright: 1. use the clip media (sounds, images, etc) that are provided as part of their software application 2. access "copyright-cleared" materials, e.g., images available through the ImagesProject (http://imagesproject.ednet.ns.ca/) for use in the project 3. create your own images and/or sounds for use in the project 4. ask permission of the copyright holder of a piece of media. This should be done in writing (such as an e-mail) and the permission should be saved and kept with the project. Any restrictions on the permission granted must be followed.

Assessment information (e.g., rubrics for products and/or process)	See sample rubrics. 　　　data_group_self_rubric.doc 　　　data_plan_group_rubric.doc 　　　data_presentation_rubric.doc 　　　data_scoring_rubric.doc
Possible extensions	There are many possibilities for extension and connection with other curriculum areas. For World War I: Why did the percentage of officers to all ranks increase dramatically in 1919? What connections could be made between the changes in the numbers of the military AFTER November 1918 and the influenza pandemic? What was happening in Canada during various years of the war? Did these events affect the numbers for those years? For other conflicts: Is there information similar to that provided for World War I? Has there been a change in the percentage of officers to all ranks over the last century? What has changed because of the increase in technological capabilities? For the present day: Is there information about the percentage of military members from each province? Would these percentages reflect the populations of the various provinces and territories?

Planning with Inspiration
Group Project Self Assessment

Name: _____ Teacher: _____

Date: _____ Title of Work: _____

Criteria	4	3	2	1	Points
Plan Development	Our plan was fully developed and complete. Our entire project is organized and ready to create with this plan.	We have a good web of ideas put together in a logical manner. It contains enough information for us to develop our project, but we will need to add details as we go.	We have a general outline for the project. It does not contain enough information for us to complete our project and we will have to make more plans later.	We were unable to complete assignment due to lack of understanding or poor use of time.	____
Time Management	It's done! We worked well together and created a plan we are very proud of. We made good use of our time and resources.	We did a decent job. We generally used our time wisely but struggled with what we were being asked. Perhaps we ran out of time.	We ran out of time because we spent too much time talking rather than working. We need help with the Inspiration software.	We didn't do a thing. We didn't understand so we didn't get anything done.	____
Communication and Sharing	I gave ideas in most facets of the project. I listened to the others and we made decisions based on everyone's input. We kept the teacher informed of our progress and asked questions when we needed help.	I discussed ideas with my partners and the teacher at times. I had other ideas but was didn't participate fully. Our final decisions didn't always include everyone's ideas.	I shared some ideas with my partners but I didn't spend a lot of time listening to the others' ideas. The plan was mostly put together by one or two people in the group. We didn't check with our teacher about our work very often.	We communicated alright! I spent more time talking about any topic other than this project. We didn't share our ideas and the plan doesn't include ideas from us all. We didn't talk to our teacher about our project.	____

Presentation Rubric

Name: _____   Reviewer: _____

Criteria	4	3	2	1	Points
Organization	Information present in a logical, interesting sequence easily followed by the audience	Information presented in logical sequence which audience could follow.	Information was presented out of sequence, presentation 'jumped around. Audience had difficulty understanding the information.	Information was not presented in an understandable sequence. Audience could not understand the information.	____
Content Knowledge	Presentation demonstrated full knowledge (more than required) of data management, providing extensive explanations and elaboration.	Content was correctly presented, but presentation did not include extensive elaborations on the information.	Presentation showed some comfort with the data included. Only rudimentary questions could be answered.	Presentation showed a weak grasp of information. Audience questions could not be answered.	———
Visuals	Visuals were well-chosen and appropriate and reinforced screen text effectively.	Visuals were used in the presentation which were related to the text.	A few visuals that rarely supported the text were used in the presentation.	No visuals were used in the presentation to support the screen text.	____
Mechanics	Presentation had no misspellings or grammatical errors.	Presentation had no more than two misspellings and/or grammatical errors.	Presentation had three misspellings and/or grammatical errors.	Presentation had four or more spelling errors and/or grammatical errors.	———
Oral Delivery	Presentation was delivered in a clear voice and terms were pronounced and used correctly. Delivery was well-paced, with appropriate pauses for understanding and questions.	Presentation was given in a clear voice. Most words were pronounced and used correctly. Pacing was acceptable, with few appropriate pauses.	Audience members had difficulty hearing presentation. Terms were incorrectly pronounced or used in an incorrect context. Pacing was too fast or too slow.	Presentation was poorly delivered: voice was too quiet, words were mumbled, terms pronounced or used incorrectly. Pacing was much too fast or too slow.	____

Remembering Our Veterans Math Project
Scoring Rubric

Name: _____   Teacher: _____

Criteria	4	3	2	1	Points
Use of Inspiration in planning the presentation.	Student has demonstrated a superior vision of the final product through the use of Inspiration.	Student has demonstrated a clear vision of the final product through the use of Inspiration.	Student has demonstrated a somewhat clear vision of the final product through the use of Inspiration.	Student has not demonstrated a clear vision of the final product through the use of Inspiration. No plan is submitted.	____
Understanding of how to generate a PowerPoint Presentation	PowerPoint presentation is very well organized and completed in the time provided. Student has demonstrated an advanced understanding of this software.	PowerPoint presentation is well organized and completed in the time provided. Student has demonstrated comfort with this software	PowerPoint presentation is not well organized and may be lacking details required. Student has demonstrated some knowledge of this software	PowerPoint presentation is incomplete. Student has demonstrated little knowledge of this software	____
Understanding of data displays, in particular histograms.	Student has demonstrated a very good understanding of data displays. Excellent use of spreadsheet software.	Student has demonstrated a good understanding of data displays. Accomplished in the use of spreadsheet software.	Student has demonstrated a basic understanding of data displays. May lack proper labeling. Some use of spreadsheet software.	Student has not demonstrated an understanding of how to develop data displays. Little use of spreadsheet software is evident.	____
Data analysis. Demonstrate an ability to "read" the data display and to formulate conclusions from secondary data.	Student has demonstrated an excellent understanding of data analysis. Multiple conclusions are drawn from each set of data. Further research has been demonstrated.	Student has demonstrated a good understanding of data analysis. Good conclusions have been drawn and further research has been demonstrated.	Student has demonstrated a rudimentary understanding of data analysis. Basic conclusions have been drawn from the data.	Student has demonstrated no understanding of data analysis. Work not completed in required time.	____
Information Gathering	Information is gathered from multiple electronic and non-electronic sources and cited in a bibliography on the PowerPoint.	Information is gathered from multiple electronic and non-electronic sources, which may be cited in incomplete form.	Information is gathered from limited electronic and non-electronic sources. Citations are limited or not given.	Information is gathered from non-electronic or electronic sources only. Citations are limited or not given.	____

December	18,182	288,947	**307,129**	19,403	323,245	**342,648**			

* some corrections have been made to the totals)

Possible activities:
- Use a spreadsheet to calculate the percentage of officers in each month of a given year, and graph the results.
- Make a histogram of the total military strength for each month of a given year, or the same month for all six years.
- Make a box and whisker plot of the total military strength for each month of a given year.
- Create a presentation or web page to connect the data to historical events (1918 or 1919 might be very interesting, since there was also the effect of the influenza pandemic as well as demobilization.)

World War I: Casualties by country

Entente Powers	Military Deaths	Civilian Deaths	Total Deaths	Wounded
Australia	59330		59330	159171

Grade Seven Mathematics
Data Management Project
Remembering Our Veterans

Name: _____   Class: _____

By the end of this project, students will be expected to…:

Mathematics:	
F3:	select, defend, and use appropriate data collection methods and evaluate issues to be considered when collecting data.
F4:	construct a histogram
F7:	formulate statistics projects to explore current issues from within mathematics, other subject areas, or the world of students.
ICT Integration:	
SEHI 9.3	understand, model, and assume personal responsibility for the acceptable use of copyrighted and other information resources
PTS 9.5	develop multimedia presentations, based on sound principles of design, with increasing confidence, efficiency and independence
RPSD 9.1	select appropriate measuring and recording devices and/or software to collect data, discover patterns of change over time, solve problems and make logical decisions based on their investigations; with teacher assistance
RPSD 9.2	create and use electronic charts, maps, tables, graphs, spreadsheets, and databases to collect, analyse and display data independently
RPSD 9.9	accurately and independently cite information sources

In the unit on "Data Management" we have worked towards achieving an understanding of the uses of data and different ways to display information. Some of the curriculum outcomes for this unit are listed above. In this project you will consolidate your understanding of these outcomes, as well as making use of technology and software applications to present your work. The project will be based on information that helps describe some of the impact of various conflicts in our history. The data provided will also help us to remember and reflect on the sacrifices that Canadians have made to help maintain peace and order in the world. You will work in groups to fulfill the tasks listed below.

Summary of the Project Requirements:

1. Develop a research project plan using **Inspiration**. A copy of this plan must be submitted prior to completing the project. You must describe the data and the displays you will be using for your presentation.
   Other questions you might include in your plan:
      - In what conflicts have Canadians participated since 1900?
      - How many Canadians have participated in each conflict?
      - What other detailed information is available for any of these conflicts?
      - What was the impact of each conflict to Canadians?
      - Where am I getting my information?
      - What websites am I going to use?

2. Develop a **PowerPoint** presentation with a minimum of ten (10) slides based on your own research (EBSCO, books, internet, etc.) as well as data supplied by teacher. Please include:
    - a bar graph showing the participation in war of Canadians during the 20th century. Choose the interval you feel is most appropriate for your graph
    - at least one other data display graph, using data gathered from your own research. For example, this could be a graph showing the participation in WWII of Canadians by province. Choose the best type of graph to display the information you have chosen
    - a histogram showing a range of distribution of data; the information about military strength in World War I may be useful for this activity
    - an analysis of the data displayed in each of the graphs given
    - a bibliography slide (or slides) listing all resources cited in the presentation. You may wish to create these through NoodleBib Express (http://www.noodletools.com)

3. Present your project to the class. Be prepared to answer questions on the data displays and data analysis.

Assessment
1. You will use a self-assessment rubric to evaluate your group's planning process and final plan in **Inspiration** used in the development of this project. (after day 1)
2. You will evaluate your contributions to the process you went through to develop this project and your group's achievements, using a self-assessment rubric.
3. Your peers and teacher will use a rubric to evaluate your group's class presentation.
4. Your teacher will use a scoring rubric to evaluate the entire project.

Planning with Inspiration
Group Project Self Assessment

Name: _____   Teacher: _____

Date: _____   Title of Work: _____

Criteria	4	3	2	1	Points
Plan Development	Our plan was fully developed and complete. Our entire project is organized and ready to create with this plan.	We have a good web of ideas put together in a logical manner. It contains enough information for us to develop our project, but we will need to add details as we go.	We have a general outline for the project. It does not contain enough information for us to complete our project and we will have to make more plans later.	We were unable to complete assignment due to lack of understanding or poor use of time.	____
Time Management	It's done! We worked well together and created a plan we are very proud of. We made good use of our time and resources.	We did a decent job. We generally used our time wisely but struggled with what we were being asked. Perhaps we ran out of time.	We ran out of time because we spent too much time talking rather than working. We need help with the Inspiration software.	We didn't do a thing. We didn't understand so we didn't get anything done.	____
Communication and Sharing	I gave ideas in most facets of the project. I listened to the others and we made decisions based on everyone's input. We kept the teacher informed of our progress and asked questions when we needed help.	I discussed ideas with my partners and the teacher at times. I had other ideas but was didn't participate fully. Our final decisions didn't always include everyone's ideas.	I shared some ideas with my partners but I didn't spend a lot of time listening to the others' ideas. The plan was mostly put together by one or two people in the group. We didn't check with our teacher about our work very often.	We communicated alright! I spent more time talking about any topic other than this project. We didn't share our ideas and the plan doesn't include ideas from us all. We didn't talk to our teacher about our project.	____

Presentation Rubric

Name: _____   Reviewer: _____

Criteria	4	3	2	1	Points
Organization	Information present in a logical, interesting sequence easily followed by the audience	Information presented in logical sequence which audience could follow.	Information was presented out of sequence, presentation 'jumped around. Audience had difficulty understanding the information.	Information was not presented in an understandable sequence. Audience could not understand the information.	____
Content Knowledge	Presentation demonstrated full knowledge (more than required) of data management, providing extensive explanations and elaboration.	Content was correctly presented, but presentation did not include extensive elaborations on the information.	Presentation showed some comfort with the data included. Only rudimentary questions could be answered.	Presentation showed a weak grasp of information. Audience questions could not be answered.	____
Visuals	Visuals were well-chosen and appropriate and reinforced screen text effectively.	Visuals were used in the presentation which were related to the text.	A few visuals that rarely supported the text were used in the presentation.	No visuals were used in the presentation to support the screen text.	____
Mechanics	Presentation had no misspellings or grammatical errors.	Presentation had no more than two misspellings and/or grammatical errors.	Presentation had three misspellings and/or grammatical errors.	Presentation had four or more spelling errors and/or grammatical errors.	____
Oral Delivery	Presentation was delivered in a clear voice and terms were pronounced and used correctly. Delivery was well-paced, with appropriate pauses for understanding and questions.	Presentation was given in a clear voice. Most words were pronounced and used correctly. Pacing was acceptable, with few appropriate pauses.	Audience members had difficulty hearing presentation. Terms were incorrectly pronounced or used in an incorrect context. Pacing was too fast or too slow.	Presentation was poorly delivered: voice was too quiet, words were mumbled, terms pronounced or used incorrectly. Pacing was much too fast or too slow.	____

Remembering Our Veterans Sample Plan

Part 1 Research/Statistics
- Veterans Affairs Canada
- Royal Canadian Legion → About Us - Military Heritage
- Department of National Defence → Directorate of History and Heritage
- Wikipedia

Part II Data Display / Analysis
- 2 Bar Graphs → Participants in War; Military Deaths
- Histogram → Numbers of Military, WWI

All data displays will:
- have a title
- be fully labelled
- be computer generated
- include written analysis

Part III Bibliography
- Listed Alphabetically
- Websites Used
- Citations made using NoodleBib Express

Canadian Military Data

The data used in this assignment is **second-hand data**. It is called second-hand data because we are using information that was collected by someone else.

Information about the Canadian military was collected and published by the Royal Canadian Legion, Veterans Affairs Canada, and the Department of National Defence.
Royal Canadian Legion Data
Canadians

	World War I	World War II	Korean War	Gulf War
Participants	628 736	1 081 865	26 791	4074
Died	66 573	44 927	516	0
Wounded	138 166	53 145	1 558	0
Prisoners of War	2 818	8 271	33	0
Royal Canadian Legion Data
Newfoundlanders

	World War I	World War II
Participants	16 922	19 460
Died	1 593	704
Wounded	unknown	unknown
Prisoners of War	180	unknown

Please Note: Newfoundland was not part of Canada during these wars.
Wikipedia Casualty Data

Military Deaths in the World Wars

Country	WWI Military Deaths	WWII Military Deaths
Canada/Newfoundland	67 906	43 600
France	1 375 800	212 000
United Kingdom	703 000	308 400
United States	126 000	407 300
Germany	1 773 700	45 000
Austria (WWI included Hungary)	1 200 000	300 000

Canadian Participants in War
Data for WWI and WWII combine Canada and Newfoundland

Canadian Participants in War
Data Display Explanation

This data display is a "**bar graph**" because it displays data from separate categories (conflicts) in bar shapes.

The heights of the bars give a quick comparison of the number of participants in each conflict.
Canadian Participants in War: Analysis

It is apparent that the greatest number of Canadians participated in WWII, while the conflict with the least participation by Canadians was the modern Gulf War.

Our involvement in war has changed through the 20th Century. Learning the reasons for this could be an interesting subject for further study.

Canadian Participants in War: Analysis

- Greatest number of participants in the two World Wars
  - Battle plans included large numbers of soldiers, with entrenched positions
- In later wars, strategies and technology had both changed
  - New techniques and equipment required fewer participants
- Changing diplomatic climate also caused changes over time

Military Deaths in the World Wars
Military Deaths in the World Wars
Data Display Explanation

This is another bar graph. This graph provides information about the military casualties from both World Wars, for several countries.

The pairs of bars allow the reader to compare the data for each country very easily.
Military Deaths in the World Wars: Analysis

- Most countries had greater military losses during World War I.
    - Changes in attitudes about war; new technologies; changing strategies
- United States had greater losses in World War II
    - Fought WWI from April 1917 to Nov. 1918
    - Fought WWII from Dec. 1941 to Aug. 1945
    - Greater involvement in Pacific as well as Europe in WWII
Canadian Military in World War I

Canadian Military Strength, 1915-1918
Canadian Military in World War I
Data Display Explanation

This data display is called a "**histogram**" because the data shows the frequency of occurrence for different numbers of participants through the war years (1915-1918)
Canadian Military Strength, 1915-1918

Canadian Military in World War I

The data used for this histogram was found in a publication through the website for the Department of National Defence. The data table is too large to include here but it is included in the bibliography.

The military strength at the end of each month was used, from January 1915 to December 1918.

What did you learn from the graph?
Let's Brainstorm!
